

Folded Face Mask Making Machine (SE-MMF901)

Summary

The Folded Face Mask machine, also known as C-type face mask machine, is the fully automatic machine for producing the folded face mask by using the ultrasonic technology to bond the 3 to 5 layer PP non-woven, activated carbon and filter materials, cutting the folded mask body to process 3M 9001,9002 mask body, etc. According to different raw materials used, the produced face masks can have different standards, such as FFP1,FFP2,NP5. Re-use ear line welding machine to weld the ear line to the body, to complete the production of folding masks. The ear line material is elastic non-woven, make the wearer's ears comfortable, without pressure, the filter effect of the mask filtration fabric is good, perfect fit human's face, can be used in the high-pollution industries, such as the building industry, the mining industry.

Technical Data

Model	SE- MMF901
Voltage	220V
Power	6KW
Size	4400 (L) *820 (W) *2500 (H) mm
Productivity	80 pcs/min

Functions and Features

- ✓ The machine automatically blank, trimming and folding welding process, the replacement of the mold can be processed folded masks of different shapes of the body
- ✓ PLC automatic controlling, automatic counting.
- ✓ Easy conditioning and convenient refueling.
- ✓ The mold uses the extraction method for the rapid replacement of mold and producing different types of molds.
- ✓ The whole machine adopt aluminum alloy, the parts after plating processing, make the whole machine beautiful, strong and doesn't rust.
- ✓ Advanced equipments for feeding and rewinding the materials.
- ✓ High stability, low failure rate.
